

## **PVC PARTITIONS INDUSTRIAL ACCESS SOLUTIONS**

### **Overview**

Our PVC Partitioning offers an ideal solution where permanent or temporary access and partitioning is required.

PVC partitioning can be easily installed using existing adequate substrates or steelwork. Unlike conventional partitioning methods our PVC Partition can be installed using a sliding track system which allows easy access to particular areas. In the event that no adequate structure is available to fit the partitioning additional framework can be supplied and installed.

All partitions can be supplied in a variety of widths and heights to suit even the largest factory. As all panels are modular, additional extensions and replacement sections can be easily supplied at a low cost.

Within each partition additional doors can also be installed. These doors include:

- High Speed Doors
- Polyethylene Doors
- Crash Doors
- PVC Strip Curtain

Additional doors can be installed using existing substrates or steelwork. If no adequate structure is available additional framework can be supplied and installed.

PVC Partitioning offers the ability to quickly divide large areas to be used for individual storage. Once these partitions have been established each areas environment can be efficiently controlled and maintained to save additional energy costs while utilising maximum space.

PVC Partitions are suitable for use in a broad range of applications, environments and industries. Some of these include:

- *General Storage & Industrial Locations*
- *Food Processing & Packaging*
- *Clinical & Hygiene*
- *Cold Storage*
- *Logistical & Warehousing*
- *Light & Heavy Commercial*

### **Advantages**

Usually used to partition particular areas our PVC Partitioning systems provide a cost effective solution to many day to day demands. The fixed and sliding design concepts ensures long term usability and trouble free operation for the life of the product.

All doors are resistant to extreme humidity and low temperatures, oil, grease and various paint products. Transparent sections can be installed as a visual aid if required.

### **Operation**

- Fixed Method – (Standard)
- Manual Slide Method -- (Optional)

### **Safety Features**

#### ***Vision***

Each door can be supplied in transparent PVC vision windows. This allows personnel on either side of the opening to see who and what is on each side of the door. Sections can be customised in colour and thickness to suit.

### **Curtain Options**

As standard all partitions are supplied with 680g/m<sup>2</sup>. Other options are available including:

900g/ m<sup>2</sup>

1700g/ m<sup>2</sup>

4mm Insulated

### **Curtain Colours**

Standard colours currently available are:

- White
- Cream
- Yellow
- Orange
- Red
- Blue
- Green
- Black
- Grey
- Clear

### **Track Options**

As standard we supply all tracks in aluminium and galvanised steel. Stainless steel finishes are also available. Fixed track systems are supplied as standard and sliding track mechanisms can also be supplied if access to each area is required.

### **Design & Reliability**

SPEEDFLEX™ has a proven track record of manufacturing and designing doors for many blue-chip companies around the world. All doors are meticulously designed and tested to ensure maximum reliability and performance.

### **Maintenance and Service**

Our entire door range has been designed to require very little maintenance. In the benefit of safety we do suggest all doors are inspected by one of our trained engineers on a periodic basis to ensure trouble free operation for the life of the product. For further information on caring for the product please visit our download section where you will find the necessary spare part and maintenance manuals.
